WEB TECHNOLOGY PROJECT

LEARNING MANAGEMENT SYSTEM

Learning Management System (LMS) is a web-based application designed to manage, organize, and deliver educational content and learning activities digitally. It provides a centralized platform where students, teachers, and administrators can interact efficiently for academic purposes.

The main purpose of developing this LMS project was to create an easy, organized, and user-friendly system for handling educational tasks such as course management, student records, assignments, attendance, and communication.

The LMS helps solve several problems faced in manual educational management systems, including:

- Difficulty in maintaining student records manually
- Time-consuming paperwork and data management
- Lack of centralized access to learning materials
- Delays in communication between students and teachers
- Increased chances of human error in record keeping

This project uses technologies such as HTML, CSS, Bootstrap, JavaScript, PHP, and MySQL to create a responsive and database-driven web application. The system allows efficient storage, retrieval, and management of data while providing a smooth user experience.

1. Project Title

Learning Management System

2. Objective

- Student management System
- Manage instructors and courses
- Assign modules and assignments
- Track course enrollments
- Record assignment submissions
- Retrieve and analyze data using SQL queries

• TECHNOLOGIES USED

➤ Front-End:

- HTML5
- CSS3
- Bootstrap
- JavaScript

➤ Back-End:

- PHP

➤ Database:

- MySQL

➤ Server:

- XAMPP (Apache Control Panel)

● Architecture of LMS Web Application

The LMS web application follows a three-tier architecture.

Users access the system through a web browser.

Requests are processed by the Apache server and PHP backend.

PHP communicates with the MySQL database to retrieve and store data dynamically.

The system supports role-based access for students, instructors, and administrators.

ER Diagram (Entity-Relationship Diagram)

The ER Diagram was extended in the web application phase with additional functionalities and tables

LMS Login Dashboard

The image shows a login dashboard for an LMS Portal. It features a light gray background with a white login form in the center. The form has a blue header 'LMS Portal' and a subtitle 'Login to your account'. Below this are three input fields: 'User ID' with a placeholder 'Enter ID', 'Password' with a placeholder 'Enter password' and a toggle icon, and 'Login As' with a dropdown menu showing 'Student'. A blue 'Login' button is at the bottom of the form.

Login As

Student

Login

Features:

1. Secure Login System
2. Role-Based Login
3. User Authentication
4. Password Protection

Student Dashboard

Features:

1. View registered courses
2. Profile details management
3. Academic timeline tracking
4. Assignment submission

Instructor Dashboard

Features:

1. Class management
2. View allotted courses
3. Student assignment handling
4. Student grading and evaluation

Admin Dashboard

Features:

1. New student admissions
2. Instructor registration
3. Course creation
4. System configuration and management

Create new curriculum courses, view total hours, or remove obsolete records.

Add New Course

University Course Catalog

Search course ID or title...

Course ID	Course Title	Credit Hours	Action
BBA507	Principles of Marketing	3 CH	Delete
BBA508	Financial Accounting	3 CH	Delete
CS501	Advanced Database Systems	3 CH	Delete
CS502	Operating Systems	3 CH	Delete
DS503	Data Mining Techniques	3 CH	Delete
ES04	Literature	3 CH	Delete
SES05	Software Architecture & Design	3 CH	Delete

Features:

1. Add new course
2. Course Management
3. Search course by id
4. Delete Course Features

Conclusion:

The Learning Management System (LMS) project successfully demonstrates the practical implementation of database management and web development concepts in a real-world application. The system was designed to manage academic activities efficiently through a secure, user-friendly, and database-driven platform.

The project integrates technologies such as HTML, CSS, Bootstrap, JavaScript, PHP, and MySQL to provide dynamic data storage, retrieval, and management. It includes different modules for administrators, instructors, and students, allowing smooth handling of courses, assignments, enrollments, and academic records.

□ Suggested Presentation Slides (For Web Technology Project – LMS)

- 1. Slide 1 – Project Title**
Learning Management System (Web Technology Project)
- 2. Slide 2 – Project Overview**
Purpose and scope of LMS
- 3. Slide 3 – Technologies Used**
Html,CSS,Java,PHP,MY SQL
- 4. Slide 4 – Database Integration**
PHP connection ,Entity-Relationship of LMS
- 5. Slide 5 – Admin Dashboard**
Features of Admin Dashboard
- 6. Slide 6 – Instructor Dashboard**
Features of Instructor Dashboard
- 7. Slide 7 – Student Dashboard**
Features of Student Dashboard
- 8. Slide 8 – Project Objectives**
Objectives and advantages of project
- 9.Slide 9 – Conclusion**

Must Prepare

- **Project File (MS Word):** Complete documentation of your project including tables, queries, and screenshots.
- **PPT Slides (PowerPoint):** Presentation slides covering project overview, database structure, queries, results, and conclusion.
- **Viva Questions & Answers:** Prepare possible viva questions with clear answers to explain your project and database concepts.
