

Project Title:

Learning Management System(LMS)

Group Members:

Hafsa Tariq

Ayesha Ejaz

PROJECT OVERVIEW

- Our project is a web-based system developed to provide an efficient, user-friendly, and secure platform for managing and processing data digitally. The project was designed as a practical implementation of the database concepts and E-R diagram created during our 3rd semester DBMS course.

TECHNOLOGIES USED

➤ Front-End:

- • HTML5
- • CSS3
- • Bootstrap
- • JavaScript

➤ Back-End:

- • PHP

➤ Database:

- MySQL

➤ Server:

- XAMPP (Apache Control Panel)

DATABASE INTEGRATION

- PHP is used to connect the website with MySQL Database.
- Data is stored, managed, and retrieved dynamically.
- ER Diagram helped in designing relationships between entities.

ADMIN DASHBOARD

- Features:
 - New student admissions
 - Instructor registration
 - Course creation
 - System configuration and management

INSTRUCTOR DASHBOARD

- Features:
- Class management
- View allotted courses
- Student assignment handling
- Student grading and evaluation

STUDENT DASHBOARD

- Features:
 - View registered courses
 - Profile details management
 - Academic timeline tracking
 - Assignment submission

PROJECT OBJECTIVES

- Automate academic management processes
- Reduce manual paperwork
- Improve data organization
- Provide separate access for different users

CONCLUSION

- The Student Management Portal successfully converts our DBMS concepts into a real-world web application using modern web technologies.
- The project helped us understand real-world application development, database connectivity, ER diagram implementation, and dynamic data handling. It also improved our technical skills in HTML, CSS, Bootstrap, JavaScript, PHP, and MySQL.

Thank You
